

We're Ice-Cloud & We Value Your Data

Since the beginning we have made a commitment to building privacy-oriented technologies. With privacy comes inherent challenges but we view all of these challenges as an opportunity to recommit to our core values. Ice-Cloud believes that everyone has the right to privacy and also to keep safe it's data.

The Ice-Cloud Story

Due to the growth of digital information and the need to store personal information easily accessible by We chose to implement the Internet cloud service called Ice-Cloud. At the beginning, we were interested in dispelling the myth that once data went online it could no longer be private and to also keep this idea to simple to use with an attractive design. It was more of an academic problem to solve than a commercial solution. Through this initial pursuit, the foundation of Ice-Cloud was laid. It was important to encompass all data, from Mac to Windows, Linux server to network volume regardless of size. Users are now empowered to share, sync and back up their data without compromising privacy and also to keep it simple and attractive.
